

Dear Hiring Manager,

I am applying for the GenAI Architect position with 20+ years of experience in cloud-native architecture, distributed systems, DevOps, and Generative AI solutions. At HCL Technologies, I designed and implemented an AI-driven incident management platform using **LangGraph, OpenAI Agents SDK, MCP, RAG, Python, Kubernetes, AWS, and Terraform**, reducing MTTR by 40% and automating end-to-end incident resolution.

My technical expertise includes **AWS (ECS, EKS, Fargate), GCP (GKE), Kubernetes, Helm, Istio, Terraform, Docker, CI/CD (GitLab, Jenkins), OpenTelemetry, CloudWatch, Python, and AI/ML frameworks** for building scalable enterprise platforms. I have also optimized cloud infrastructure costs by 35% through Infrastructure as Code and workload optimization strategies.

I specialize in building enterprise-grade **GenAI, Agentic AI, and multi-agent systems** with reasoning workflows, memory management, and scalable tool integration for production-ready deployments. I am excited about the opportunity to contribute my expertise in AI architecture and cloud engineering to your organization.

Sincerely,

Neeraj Vohra
